PRODUCING ENERGY: BioTown Ag, Reynolds, Ind., joined with Green Rock Energy Partners to form BioTown Biogas. This entity produces renewable energy — both electricity and renewable natural gas.  
BIOTOWN AG

BioTown Biogas received an award from Energy Vision as an outstanding renewable energy project at an event in New York City recently. BioTown Biogas is a partnership between BioTown Ag in Reynolds, Ind., and Green Rock Energy Partners. Energy Vision is a nonprofit that promotes renewable energy projects.

Earlier this year, [BioTown Biogas completed expansion](#) of its digester processes that process food waste, manure and other ag waste into electricity. The operation is now producing an estimated 42 million kilowatt-hours of renewable power plus more than 3 million diesel-equivalent gallons of renewable natural gas, known as RNG fuel, each year.

Martin Mitchell of Green Rock Energy Partners says the power generated would be enough to power 4,500 to 5,000 households. The digester on the farm near Reynolds is now one of the largest on-farm digesters in the world.
